

The Quantalytics **H-Box**® is network security and web application security testing device, containing one of the most comprehensive collections of network penetration and security testing tools available today. In addition to its breadth of scope, the **H-Box** is a small form factor, ultra-low power server. The **H-Box** can be installed on a network for regular testing of vulnerabilities as changes in the network and its peripherals occur over time, or used as a portable device for consultants to test security risks, including WiFi and Bluetooth communication.

We encourage you to go to our website, www.quantalytics.com, for a more comprehensive explanation of each package's features.
